

Complement your Science Curriculum with

Explorations

into the

Microscopic World

WebEM Exploration CDs are designed to be viewed with a web browser and contain scanning electron microscopy explorations of various subjects.

Schools are permitted to allow intranet access to purchased WebEM Exploration CDs for all students and teachers.

Multiple specimen selection and a choice of three information levels makes it suitable for all ages.

Each web page has hotspots associated with points of interest on the specimen. Clicking on a ZOOM IN hotspot takes you to another page, where the region clicked is presented at higher magnification, or repositioned for a better view. Clicking on remaining hotspots will open small windows containing detailed information.

Can you find every hotspot in every window and therefore find every image?

There are 18 different specimens (152 images) to view in the first CD to be released; House Ants

The FIRST TEN SCHOOLS to most accurately identify the photos on this page will each receive a free 'House Ants' Exploration CD!
